Java

```java
class Solution {
    public String getEncryptedString(String s, int k) {

    }
}
```

JavaScript

```javascript
/**
 * @param {string} s
 * @param {number} k
 * @return {string}
 */
var getEncryptedString = function(s, k) {

};
```

TypeScript

```typescript
function getEncryptedString(s: string, k: number): string {

};
```

C++

```cpp
class Solution {
```

```cpp
public:
    string getEncryptedString(string s, int k) {

    }
};
```

C#

```csharp
public class Solution {
    public string GetEncryptedString(string s, int k) {

    }
}
```

Kotlin

```kotlin
class Solution {
    fun getEncryptedString(s: String, k: Int): String {

    }
}
```

Go

```go
func getEncryptedString(s string, k int) string {

}
```
